

# AVIGILON™ NVR6 FIPS

## Pre-hardened FIPS-compliant Network Video Recorders

With the rise of sophisticated cyberattacks, protecting sensitive information is a top priority for federal government agencies and requires third-party partners to comply with strict Department of Defense (DoD) regulations. The sixth-generation Avigilon Network Video Recorder FIPS (NVR6 FIPS) series offers up to 200 TB of storage and utilizes FIPS-compliant cryptography to protect data with secure network video recording and encryption. Minimize cybersecurity vulnerabilities while operating on DoD networks by leveraging Avigilon's JITC-certified<sup>1</sup> video security ecosystem.

### Pre-hardened for FIPS compliance

Fulfilling cybersecurity requirements for government agencies, the NVR6 FIPS is designed to protect sensitive data. Whether in transit or at rest, its FIPS-compliant encryption ensures data security.

### Government-compliant manufacturing

Approved for government use, the NVR6 FIPS is built in a federal government-compliant facility in the continental United States, meeting Federal Acquisition Regulations for procurement, trade agreements and NDAA regulations.

### Certified infrastructure on government networks

Ensure that only authorized devices interact with each other using the NVR6 FIPS, which allows for quick verification and authorization on federal government networks.

### AI-powered and FIPS-compliant

Securely locate a person or vehicle of interest across an entire site using the AI-powered Avigilon Unity Video<sup>2</sup> software, along with FIPS-compliant video cryptography pre-configured on the NVR6 FIPS for secure recording.

### Minimize the risk of data loss

Ensure all your video data is protected and available in crucial moments. Reduce data loss risk to 0.0041% in five years with the NVR6 FIPS storage redundancy structure that duplicates data.

### End-to-end support

Gain lifetime 24/7 Avigilon telephone technical support, a five-year parts warranty<sup>3</sup> and a keep-your-drive warranty to ensure all replaced drives remain in federal government custody.
